Objective

Computer Science undergraduate at The National Institute of Engineering with a strong foundation in Java, Python, SQL, Object-Oriented Programming, and Generative AI fundamentals. Experienced in building concurrent Java applications, RESTful services, and AI-powered developer tools. Passionate about solving complex engineering problems and developing scalable software systems using modern software engineering practices. Seeking a Software Engineering Internship to contribute to high-impact products while growing as a backend software engineer

Education

The National Institute of Engineering, B.E. in Computer Science | CGPA: 9.32/10

Graduation:2028

Technical Skills

Programming Languages: Java, Python, JavaScript, SQL.

Backend and APIs: Spring Boot, REST APIs, JDBC, JUnit

Build Tools: Maven, Gradle.

Databases: MySQL, PostgreSQL, SQLite.

Frontend: React.js, HTML5, CSS3, JavaScript.

Version Control: Git, GitHub.

AI & Emerging Technologies: Generative AI Fundamentals, Prompt Engineering, GitHub API Integration.

Tools: VS Code, Eclipse, Postman, Netlify, Railway, Vercel, GitHub Pages.

Core OS Concepts: Data Structures and Algorithms, OOP, OS, DBMS, CN, Software Development Life Cycle.

Software Engineering Projects

1) FlashEngine | High Concurrency Flash Sale Processing System

[GitHub](#) | Jul'26

Tech: Java, Java Networking (HttpServer), Java Streams

- Simulated **100 concurrent client requests** using Java multithreading, **delivering 0 overselling, 100% stock consistency, and 10 successful purchases** under peak contention.
- Designed a lock-free inventory allocator **using CAS and AtomicInteger**, eliminating race conditions while maximizing throughput under concurrent execution.
- Implemented **4 Java concurrency utilities** (ExecutorService, AtomicInteger, ConcurrentHashMap, CountdownLatch), **3 custom exception handlers**, and embedded REST endpoints using JDK HttpServer.
- Achieved **0.412 ms average request latency across 100 simulated transactions**, while enforcing duplicate-purchase prevention and **3 requests/sec per-user rate limiting**.

2) GitHub Portfolio Analyzer | AI-Powered GitHub Profile Evaluation Platform

[GitHub](#) | Feb'26

Tech: Python, GitHub API, Data Analysis

- Developed an AI-powered GitHub portfolio analyzer that evaluates developer profiles using repository activity, contribution history, and project quality metrics.
- Integrated the **GitHub REST API** to automatically collect repository metadata and generate structured recruiter-oriented evaluation reports.
- Designed a **scoring algorithm** that analyzes multiple profile attributes to provide **personalized recommendations** for improving developer visibility.
- Automated **end-to-end GitHub profile analysis**, generating structured evaluation reports and personalized improvement recommendations.

Certifications

- Data Structures — [Coursera](#)
- Design and Analysis of Algorithms --- [Codechef](#)
- Version Control with Git — [Coursera](#)

Achievements & Hackathons

1. Infosys Springboard – Pragati: Path to Future | Cohort 9

Jul'26 - Present

- Selected for Cohort 9 of the **Pragati: Path to Future** program by Infosys Springboard.
- Participating in industry-led sessions on software engineering, career development, Generative AI, cloud technologies, and professional skills.

2. Hacktoberfest 2025 — Super Contributor

[Badge](#) | Oct'25

- Earned the **Super Contributor badge** by submitting **6+ accepted pull requests** to open-source projects.
- Demonstrated consistent contributions, version control proficiency, and collaboration in global open-source communities.

3. Global Sustainability Challenge — South Asia Regional Finale — *Finalist*

Dec'25-Feb'26

- Selected as a **regional finalist** in a competitive sustainability-focused technology challenge.
- Designed and presented a real-world solution in a **6-member team**, evaluated by expert jury panels.

4. UnsaidTalks GitHub Analyzer Hackathon — Top 10 Rank Holder — *Consolation prize*

[Github](#) | Feb'26

- Developed and analyzed GitHub repository insights using automated evaluation techniques.
- Ranked among the Top 10 participants based on innovation, analytical accuracy, and implementation quality.

5. UnsaidTalks — Empathy Encryption Hackathon— Top 1 Rank Holder

[Github](#) | Feb'26

- Designed an AI-driven solution focused on interpreting emotionally nuanced communication.
- Applied human-centered thinking principles to balance security, empathy, and usability.
